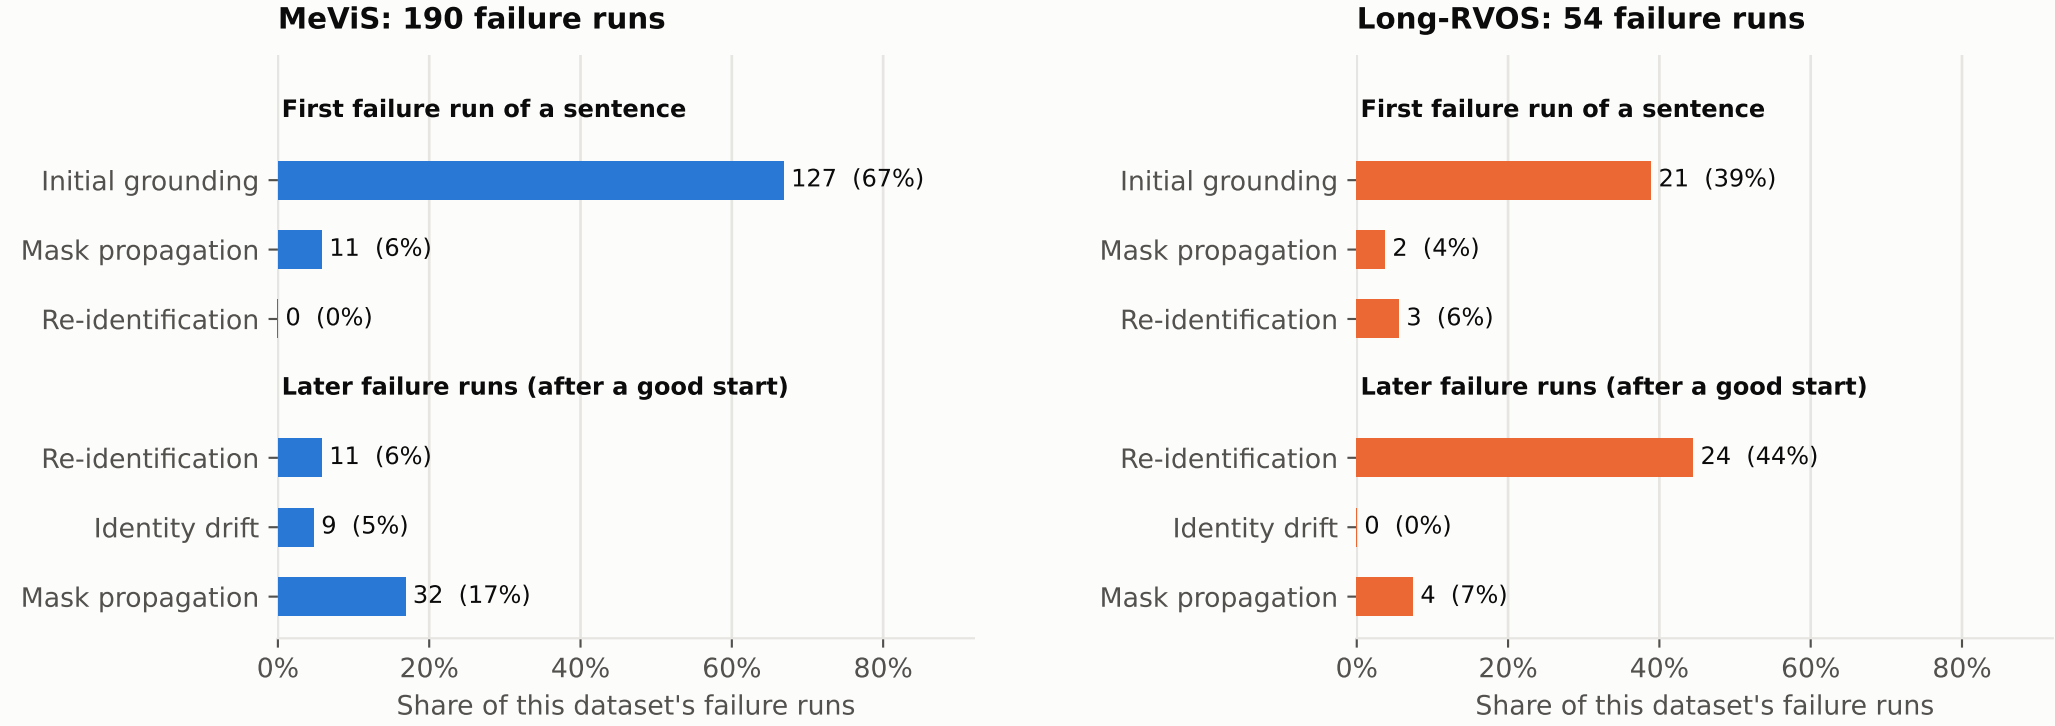
MeViS fails at the start; Long-RVOS fails after a good start (mostly re-identification)



A0 (top-1 start, no memory), sentences visible at frame 0. A failure run = 3 or more consecutive visible frames with IoU < 0.5. Counts are runs, not sentences:
MeViS 138 sentences have a first failure run; Long-RVOS 26. On MeViS, 62% of the later runs come from one video (329909730c21).
Selected subsets, single runs; not official benchmark results. Sentences of one video are not independent.
